

BUSINESS INTELLIGENCE ARCHITECT (m/f)

TCI Consult is a Vienna based boutique consulting company focusing on holistic Corporate Management, Bank Management, Controlling & Reporting and Business Performance Management. We provide consulting services on the subjects of Data Warehousing and Business Intelligence. Our high level of expertise and trust is based on more than 20 years of professional experience in Information Management and a complete independence from technology vendors, which forms the basis for the objective management of technology evaluations.

We support our clients from the first idea, providing feasibility consulting, the conception of roadmaps through to a goal oriented project implementation and care for all aspects of successful communication. Our reference list represents large enterprises from all industries, though we concentrate on Financial Services, Telecom Industry, Energy Supply Companies and the Public Sector.

We are looking for a **Business Intelligence Architect (m/f)** to expand our team within a large data related project in the public sector. The role is considered as a senior level consultant within the team and has to provide functional, technical and process leadership.

The responsibilities include design, development and enforcement of standards within an appropriate BI architecture. An ideal candidate is capable of overseeing complex data modelling and advanced project metadata development and is proficient in the following tasks:

- Leading the strategic design and implementation of an enterprise-wide business intelligence solution
- Identifying, researching and resolving technical data related problems
- The design of specifications and standards for semantic layers and multidimensional models for complex BI projects across all environments is a major element of this role

If you bring along profound experiences in dealing with the mentioned topics and look for a new challenge in an international environment, we would be happy to receive your application. The position provides full time engagement. University graduates in the field of data related management or information technology would be preferred. Excellent German and English skills are essential.

If we have managed to get your attention, we would certainly like to hear from you. Send your full application including a picture to:
